

1. OVERVIEW

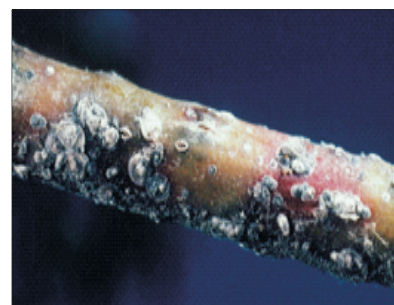

Blended with high quality base oil which protects the Orchards from attack of different insects mainly from San Jose scale. The oil is sprayed in the form of oil in water emulsion on Orchards when the ambient temperature is around 5°C ~ 40°C. The waxy protective shield of the insect is dissolved by the emulsion and the oil film envelops the insect thereby killing it by cutting off its air supply. This oil can be used for protection of Apples, Eucalyptus, etc....
